FOR IMMEDIATE RELEASE

## **A Super-Quiet Solution**

LONG ISLAND CITY, N.Y., September 26, 2013—MechoSystems' WhisperTrac 3000 is a sleek, super-quiet, and technically innovative solution for low-voltage motorized draperies.

It is available in two powerful models and can accommodate a tandem-motor option for heavy drapery applications. And draperies can be drawn to a width of over 58 ft. (17.68m). Custom radius bends are easily attained with the system.

Both models operate with a decorator-style paddle switch, a two- or four-button IQ<sup>®</sup> switch, a 15-channel infrared (IR) remote controller with a receiving eye, or an RF (radio frequency) receiver with a wireless wall switch or transmitter.

WhisperTrac 3000 is also compatible with a range of MechoSystems' controls and networks, and is even more versatile when connected to an optional IQ/485<sup>®</sup> network-interface accessory. The IQ/485 NI card allows integration with 3rd-party automation systems, linking the window treatment with a host of A/V, lighting, security, energy-conservation, and comfort controls via RS-485, RS-232, IP plus IQ<sup>®</sup> switches, or dry-contact connections.

This innovative drapery system also supports pinch-pleat Ripplefold<sup>®</sup> or accordion-fold drapery styles to meet the demands of designers and architects.

The WhisperTrac 3000 system is ideal for residential, home theater, conference room, hospitality, and light commercial applications.
