

We're in *Architectural Record*

Jan Berman's comments in *Architectural Record's* CEU on daylighting

MechoShade Systems is mentioned in the June 2009 *Architectural Record* article, "Daylight Savings: Window Systems Deliver Light and Reduced Energy Costs." It is also online under the CEU section of the *Architectural Record* Web site: archrecord.construction.com/Default.asp.

There is a valuable discussion of various techniques for incorporating daylighting into a building. It includes commentary by Jan Berman concerning natural light and window-shading technology that enable a building to achieve proper daylighting.

At the end of the article is a test, which architects can take for CEU credits.

GREENGUARD® certification

Shadecloths certified by GEI

ThermoVeil®, EcoVeil® Screens, EcoVeil® Naturals, EuroVeil®, and EuroTwill® shadecloths have received worldwide certification from the GREENGUARD Environmental Institute (GEI).

These MechoShade Systems shadecloths are now covered by two GEI programs:

- GREENGUARD Indoor Air Quality Certified® product certification
- GREENGUARD Children & SchoolsSM product certification.

For decades, MechoShade Systems has emphasized healthful and environmentally friendly products. The company has developed many of its shadecloth lines to satisfy stringent criteria, such as flame retardancy, resistance to microbes and fungi, and the Cradle to CradleSM protocol of MBDC. And now the shadecloths meet the strict indoor-air-quality standards set forth by GEI.
