

800+ CAD Product Drawings Available Online Now

MechoSystems has increased its online construction-drawing library to about 850 drawings, roughly 300 more than before. This larger selection makes it even easier to find the right construction drawings for your particular application. Many frequently occurring installation scenarios are represented, now including corner conditions.

To view or download the files, visit mechosystems.com, click on “Construction drawings,” in the top right corner of the page, and find:

- A broader range of solutions.
- Instant availability.
- Quick-preview function.
- No login required.
- Availability in .dwg and .pdf formats.

Green Experts at MechoSystems

Leadership in Energy and Environmental Design (LEED®) certification, developed by the U.S. Green Building Council, is one of the most widely recognized standards for sustainable buildings. With LEED fast becoming a market advantage—and in some cases a requirement—it’s important for professionals to be up to date.

We’re proud to have several sustainability experts at MechoSystems, including LEED APs Kathleen Powers, Jeffery Glick, Denise Khoury, and Regional Sales Manager Jim Ashmore. They’re happy to serve as a resource for questions about sustainable building and LEED certification.

Did you know? Existing building projects are expected to grow at even faster rates than new construction. By 2015, the dollar value of the largest nonresidential retrofit and renovation activity will more than triple, to an estimated \$14–18 billion.
