

## Meet IQ2.

The next generation of the IQ® family—the WhisperShade® IQ®2 Electronic Drive Unit—is here. This intelligent drive unit adds flexibility to the original IQ design without adding cost. Upgraded control electronics and networking protocols are built directly into the unit. This means control at every scale is made available simply by daisy-chaining, without external controllers. Installation is simpler and more cost-effective as a result.

### Innovations at a glance:

- Internal MechoNet-based networking capabilities.
- Enhanced control electronics.
- Simplified wiring.

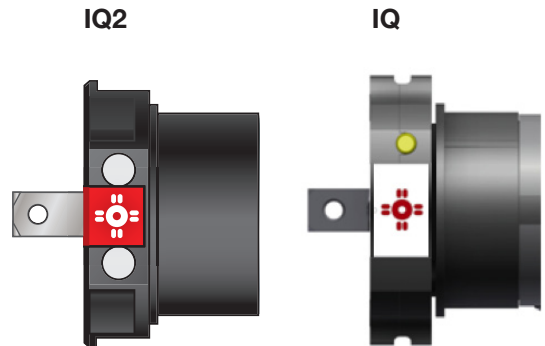

### What IQ2 delivers:

- Smart, flexible control of up to 255 motors per switch.
- More convenient installation.
- Easier integration with 3rd-party systems.
- Remote configuration, monitoring, and troubleshooting.
- Cost-effectiveness.

And IQ2 can be programmed for full compatibility with previous IQ Motor solutions.

**To distinguish between IQ2 and IQ, look at the unit head. A new branding plate includes:**

- A white MechoSystems sun instead of red.
- Two buttons instead of one.

**For more information, please see the [WhisperShade IQ® System brochure](#).**
