## Shadecloth Cleaning Instructions

### For ThermoVeil®, EuroVeil®, EuroTwill®, EcoVeil®, MirroFilm®, and Classic Blackout:

- Operate the shade daily. The up-and-down movement will remove most dust, prevent build-up, and maintain clarity.
- Keep the shade in the brackets or cassette to prevent unnecessary handling and reinstallation.
- Use the chain or cord to roll up and unroll the shade. Not doing so may cause the shade material to crease, dent, fold, or become misaligned.
- Do not use window cleaners or other solvents containing ammonia.
- Avoid steam cleaning as it may melt the PVC or distort the stability of the shade.
- Dust, wipe, and dry in a single direction with a feather duster or soft, dry 100% cotton cloth. Avoid abrasive cleaning or wiping materials such as paper towels, sponges, brushes, and bristles.
- Use a mild, diluted cleaning solution (see below) to remove fingerprints and smudges, spots, or greasy residue. Avoid harsh, abrasive cleaners that could scratch or damage the surface of the PVC.
  - Mix 2 oz. dishwashing liquid with 14 oz. tap water. Rubbing alcohol (isopropyl), holistic, and citrus-based natural cleaners can also be used.
  - Spray enough onto the shade to allow surface cleaning without scratching.
- Avoid cleaning in bright, hot sunlight to prevent soap spotting.

### For Equinox, Midnite®, EcoVeil Sheer™, and AcoustiVeil:

- Operate the shade daily. The up-and-down movement will remove most dust, prevent build-up, and maintain clarity.
- Keep the shade in the brackets or cassette to prevent unnecessary handling and reinstallation.
- Use the chain or cord to roll up and unroll the shade. Not doing so may cause the shade material to crease, dent, fold, or become misaligned.
- Do not use cleaning solutions.
- Dust, wipe, and dry in a single direction with a soft, slightly damp 100% cotton cloth.
